Half a Century of Service

The Texas Pecan Nursery is one of the oldest nurseries in the United States. Our nurseries are near the center of the world's largest pecan regions. Our trees are acclimated to Southwestern soil and weather conditions; they are toughened by cold winters and hot, dry summers. We can supply all the varieties best adapted to any region where pecans are grown.

We dig every one of our trees separately, by hand, to preserve the lateral root system. The trees are carefully packed and shipment is made the same day as trees are dug. Our method of packing keeps the trees moist until you receive them.

Our trees reach you from twenty-four to forty-eight hours earlier than shipments coming from distant nurseries. This assures better conditions of the trees on arrival, and a saving in transportation cost as well.

Our prices are very reasonable. Because most of our business is done by mail, we save the expenses that ordinarily must be included in the price when trees are sold by agents through personal calls. This saving enables us to offer you prices from 30 to 50 per cent less than prices asked by nurseries selling through agents.

All our prices are F. O. B. Tyler, Texas. Send cash with order, or half and balance C. O. D.

When you remember that at 20 years the pecan orchard is merely entering its heaviest bearing period, that the average annual yield during the second twenty years is estimated to be four times as great as the yearly average during the entire bearing period preceding the twentieth year—you will realize the truth of the statement, "You can leave no better inheritance to your family than a pecan grove."

OUR BETTER ROOTED PECAN TREES LIVE BETTER—GROW BETTER—PRODUCE BETTER

Our Root
System

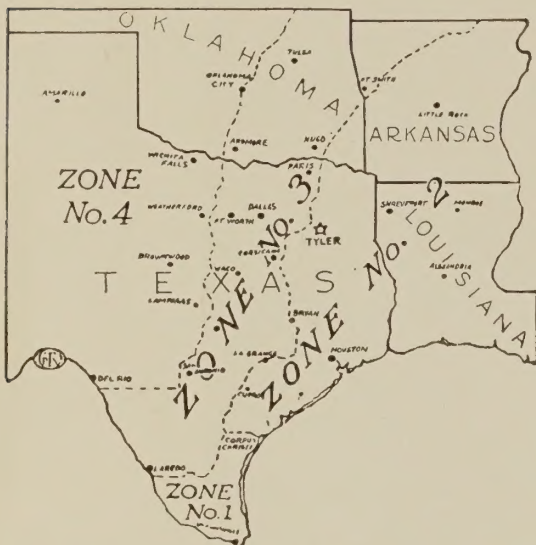

Average
Root System

Root Systems

Measurements are from ground up.

The root system we have developed assures you success because a good lateral root system is the Life and Making of a pecan tree—the more Lateral Root a tree has, the more feed roots it will have, and the more feed roots a tree has, the more plant food and moisture it can gather; and the more plant food and moisture a tree can get, the better it will live, grow, and produce. Don't you believe it will pay you to buy well-rooted trees?

HOW TO SELECT THE PECAN VARIETIES BEST SUITED TO YOUR SOIL AND CLIMATE

Zone No. 1—Not recommended for commercial planting. We recommend for home planting in east part: Stuart, Success, Moore, Money Maker; in west part: Burkett, Success, Schley.

Zone No. 2—Only the Eastern Varieties recommended: Stuart, Success, Moore, Schley, Delmas, Money Maker, Stuart. We would add Burkett for hill land in the west central part. Success, Moore, Money Maker, Schley, and Stuart should be used in all plantings. Plant Delmas on upland. Stuart seems to be especially adapted to all parts of this section and bottom lands in the western part. These are known as tested Eastern Varieties.

Zone No. 3—Both Eastern and Western Varieties recommended—Western Varieties for west part and uplands; Eastern Varieties in east part and lowlands. Burkett, Western Schley and Oklahoma are tested Western Varieties. Stuart and Success may be used in this zone.

Zone No. 4—Plant Western Varieties and Stuart.

Other States—Continue zone lines northwest about 100 to 125 miles, planting Eastern Varieties in the lower altitudes and river bottoms of Zone 3, and the Western Varieties on the uplands and in the higher altitudes of Zone 3. Plant Western Varieties, Stuart and Success on all lands west of dividing line between Zones 3 and 4.

Guarantee

All nursery stock sold by Texas Pecan Nursery is guaranteed to be true to label, and as described herein. If any stock proves untrue to our description, seller shall be liable to purchaser only for the amount of purchase price. Trees are triple checked and packed to reach you in good condition. All stock has been inspected by State and Federal Inspector. Any Pecan trees that die, and claim is placed by the first of June will be replaced at half price.

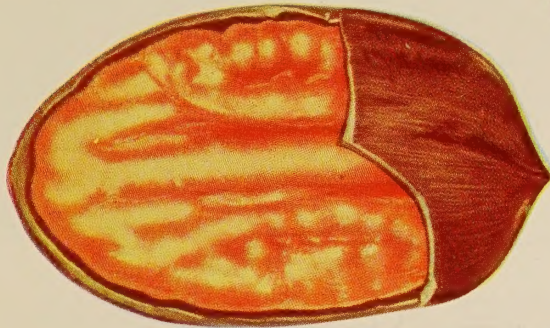

We accept all orders subject to crop conditions, and with the understanding that the same shall be void should injury befall the stock because of hail, fire, frost, or other causes beyond our control. In such case we will refund all money paid on order.

All nursery stock will be properly packed for delivery; however, after it leaves our shed all stock will travel at buyer's risk.

Eastern Varieties of Paper Shell Pecans

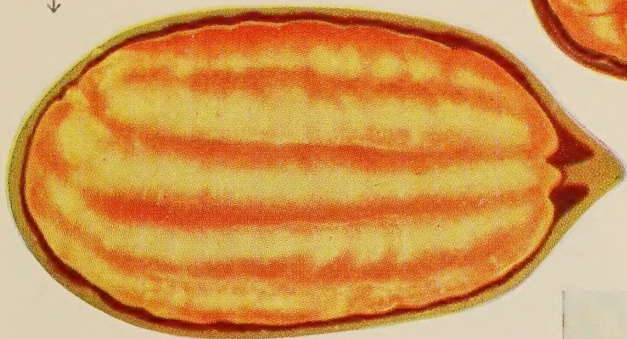

STUART

The Stuart comes nearer being suited to all sections of the country and all soils than any other variety. A large nut, fills well, medium to heavy bearer. A hardy, fast-growing tree. One of the earliest ripening of all large standard pecans. 48 per cent meat.

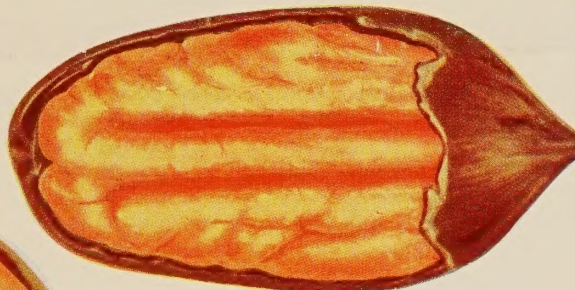

DELMAS

A very vigorous growing tree and heavy bearer, with splendid foliage, large nuts. Forty to fifty will make a pound. One of the best for shade purposes. 48 per cent meat.

SUCCESS

A large and strictly first-class pecan. Strong growing tree, early bearer, thin shell, cracks well and the meats can be taken out in halves. Ripens almost ten days later than Stuart, and is fast gaining in prominence. 52 per cent meat.

SCHLEY

This is an ideal pecan. Large size, very thin shell, fills and shells out well; fine flavor. Rapid growing tree. Beautiful foliage, and the nuts sell for 5 cents to 10 cents more per pound than other varieties. 60 per cent meat.

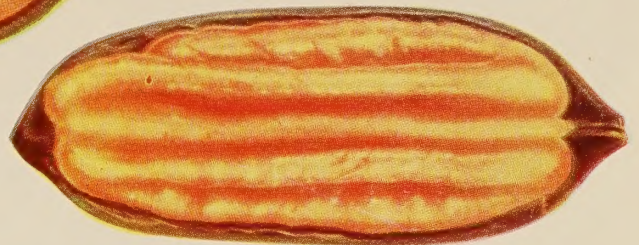

MOORE

A very fast growing tree. Medium size nuts, thin shells, good flavor, very productive, and one of the earliest to mature. About 49 per cent meat.

MEYHAN

The biggest Pecan grown. Looks like Western Schley, except much larger. This is an Eastern variety. A very vigorous growing tree with splendid long slender nuts. It is a first class pecan with a richly flavored kernel. The nut is about 2½ inches long—average about 31 nuts to the pound. Luxuriantly foliaged shade tree anywhere.

MONEY MAKER

Originated in Madison Parish, Louisiana; widely disseminated. Size, medium; kernel, fairly plump; quality, fair. Especially suited to planting in the northern range of the area adapted to southern varieties. 46 per cent meat.

Prices on Both Eastern and Western Varieties of Pecan Trees

2 to 3 inch cal.	12.00	1000.00

Notice—All pecan trees can be shipped by parcel post up to and including the 3 to 4 ft. size. Add 25% to price of each.

Western Varieties of Papershell Pecans

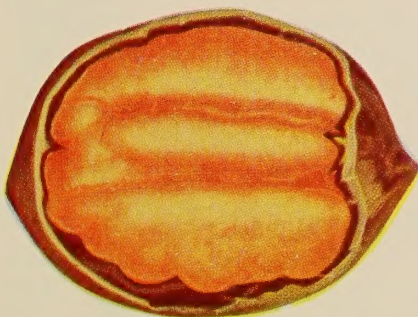

WESTERN SCHLEY

Very similar to Eastern Schley, except that it thrives better in the drier climate and higher altitudes of the West. A very fine nut for the West. 60 per cent meat.

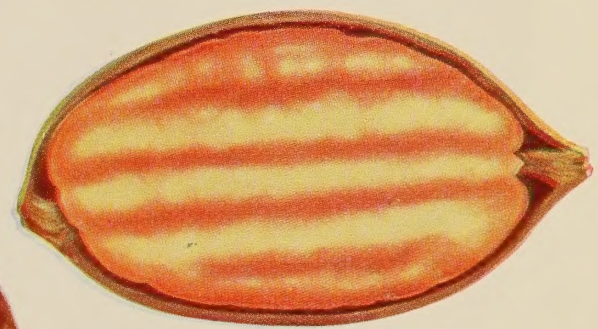

BURKETT

Originated at Clyde, Texas; one of the best of the Western list. It is also doing well on high ground in East Texas. Medium to large size, fits well, good flavor, and prolific. 55 per cent meat.

OKLAHOMA

Mother tree, Ardmore, Oklahoma. Large nut with shape much like the Delmas. Thin shell. About forty to the pound. A heavy producer. The tree is rugged, with drooping or willowy branches. Matures rather late. We believe this will prove to be a good variety for Texas. 46 per cent meat.

BELLE OF GEORGIA

Freestone, white Flesh, red cheeked, large and firm.

years old. One of the best for home and market use.

J. H. Hale—Large; yellow overlaid with bright carmine; flesh, deep yellow; firm, fine grained; delicious flavor. Freestone, ripens in July.

Elberta—Most widely known of all peaches. Very attractive appearance; large; deep yellow, splashed crimson; perfect freestone. Trees vigorous, highly productive. Ripens July 5th to 20th.

Chinese Cling—Skin cream with short fuzz. Mottlings of dull red, covering one-third to one-half of surface next to stem. Flesh white with little red at surface next to seed. Tender and very juicy.

Belle of Georgia—Freestone, white flesh, red cheeked; very large and firm. Excellent flavor. Good shipper. Tree is rapid grower and very productive. Ripens latter part of June.

Hale Haven—Freestone, tough skin, very highly colored and well adapted to large commercial planting. Tree vigorous, hardy; fruit large; good shipper. Ripens about two weeks earlier than Elbertas.

Early Elberta—Freestone, clear yellow with blush; fine grained and sweet. Tree a strong grower; ripens about one week earlier than Elberta.

Golden Jubilee—An early, yellow freestone of good quality. Demands top prices because of its earliness and high quality. Good canner. Ripens in July.

Peaches by the Bushel for Canning, Eating or Commercial Orchards

Our peach trees are grown from buds carefully selected from early bearing trees that are true to name. Why take the risk with others when we guarantee every tree sold to be just what you order.

Varieties of Peaches that will bear from early summer until fall.

Red Indian—Old fashion Indian Peach that is so good to eat; splendid for pickling and preserving. If you want the best peach in the world for preserving get the Indian peach. Ripens in August.

Frank—Clingstone. One of our best peaches. Ripens August 10th to 15th. Good flavor; large yellow peach, that always demands a good price. Some of Mr. Stubenrauch original trees have produced continuously for 31 years without the loss of a crop. Bears very young; has good crop at 2

ELBERTA PEACH

Golden Yellow, tinted red, freestone, a good peach. Most widely known of all peaches.

GOLDEN JUBILEE

An early, yellow freestone of good quality. Demands top prices because of its earliness and high quality. Good canner. Ripens in July.

RED BIRD

Very red texture inside and out. Excellent flavor cling stone; ripens 15 days before Elberta.

Red Haven—Bright red coloring on yellow background. Smooth, almost fuzzless. Firm yellow freestone. Trees strong growers and prolific bearers.

Ripens in early June.

Early Rose—A cling; well colored with some red in flesh. Ripens June 15th or earlier. Very good for commercial plantings.

Mayflower—A "red-overall" peach; handsome, splendid quality. Should be in every home orchard; sells readily on the market. Ripens in May.

Bearing size	2.50	2.40	2.25

PLUMS

Pleasure and profit from plums. They are beautiful, delicious, and easy to sell.

Methley—Handsome tree; fruit large; golden red. It is a very good producer. Ripens May 25th.

Bruce—Very red and productive. It is a good plum for commercial use. It is well suited to North Texas, the Panhandle and Oklahoma. Ripens about June 1st.

Burbank—This plum is extremely popular in all sections. It is very large, richly colored, blue-red mottled, dotted with yellow, and a heavy bearer. Ripens in July.

Santa Rosa—Large, Purplish crimson fruit. Delicious amber colored flesh, crimson and pink veined. Tops in quality for market and home use. Bears heavily each year. Ripens in June.

BURBANK PLUM

Early variety, red fruits, good for all uses.

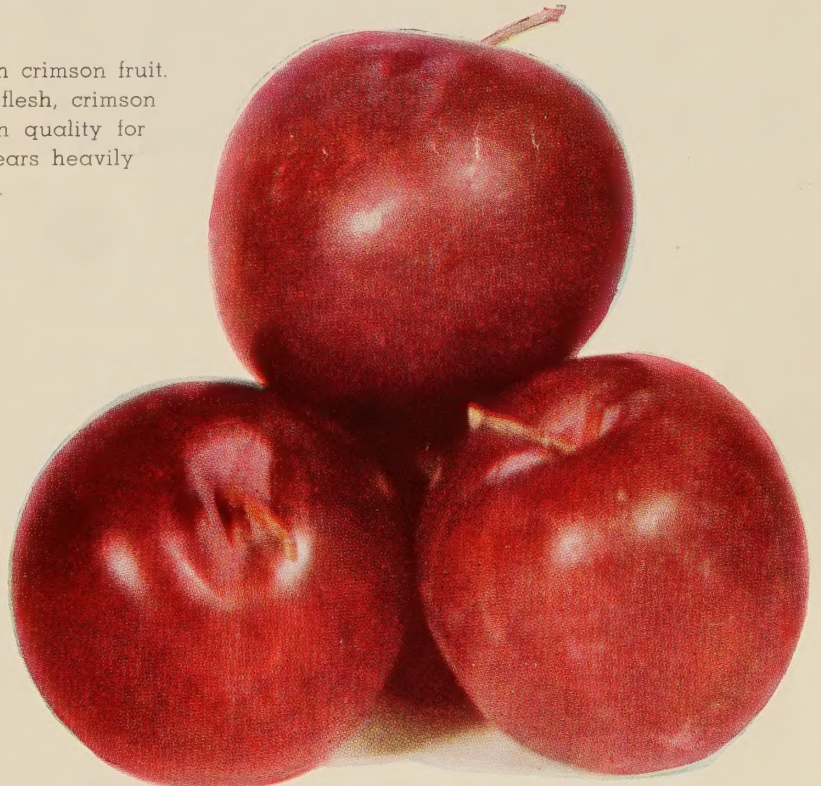

BRUCE PLUM

Large sized fruit, red in color, ripens early June

ALLRED PLUM

Certainly, the Allred is one of the most remarkable trees of this day and age. In the spring, there's first a blazing shower of blossoms, followed by the deep red leaves. Then comes the fruit—a maroon red on the outside with a tender dark red flesh. The Allred serves a two-fold purpose. First, it is a beautiful ornamental tree for your yard. Second, of course, is the luscious fruit which it produces.

EUREKA

TANE NASHI PERSIMMON

This is a long, bright orange Persimmon that is seedless. A tree loaded with Tani-Nashi looks just like a picture. You know, Persimmon trees will hold their fruit right up until late fall or winter. One of the prettiest sights I ever saw was a Persimmon tree loaded with fruit and snow flying all around it.

A very hardy variety that is best known for its consistent, heavy bearing quality. The tree is very attractive.

Cherries

MONTMORENCY

Large rich red. Follows early Richmond. A good bearer.

EARLY RICHMOND

Sour cherries for pies. Early bearer. Prolific.

SCHMIDT'S SWEET CHERRY

Sweet cherry, excellent fruit, heavy bearer.

PEARS FOR EVERY PURPOSE

Leconte—Large; pyriform; smooth; pale yellow. Quality good when properly ripened. Ripens July 20th to end of August. Begins to bear when five years old.

Bartlett—Everyone is acquainted with this large yellow pear. Fruit very rich and highly aromatic. Tree grows dense and of even, conical shape. Ripens in August.

Garber—Oriental strain, like the Smith's Fruit; resembles Kieffer in size, shape and color. Ripens late September.

Pineapple Pear—Valuable for the South for canning. Flesh coarse, about the quality of Kieffer. Tree good grower, not subject to blight; good bearer. Ripens in August. Best suited to that section within 100 to 150 miles of the Gulf Coast.

Kieffer—Best variety for the Southwest; large, yellow with rusty cheek; fine for cooking and market. Ripens in October.
